

**Project Design**  
**Phase-I Proposed**  
**Solution**

<b>S.No</b>	<b>Parameter</b>	<b>Description</b>
<b>1.</b>	<b>Problem Statement (Problem to be solved)</b>	Having excess inventory poses several significant business and operational problems for retailers. Excess inventory means the company or store ordered more inventory than was demanded. Most businesses are burdened with the costs associated with carrying extra inventory, therefore, short-term forecasting is so important in the retail and consumer goods industry. So analysis and Visualization of stocks should be done to prevent the loss of retailers and proper management of store.
<b>2.</b>	<b>Idea / Solution description</b>	Effective retail inventory analytics results in lower costs and a better understanding of sales patterns. Using Cognos analytics tools information like, <ol style="list-style-type: none"> <li>1. Product locations</li> <li>2. Quantities of each product type</li> <li>3. Which stock sells well and which doesn't, by location and sales channel.</li> <li>4. Profit margin by style, model, product line or item</li> <li>5. Ideal amount of inventory to have in back stock and storage</li> <li>6. How many products to reorder and how often</li> <li>7. When to discontinue a product</li> <li>8. How changing seasons affect sales</li> </ol> Can be analysed which help them increasing profits while avoiding overstock and minimizing expenses.
<b>3.</b>	<b>Novelty / Uniqueness</b>	A Dashboard for centralized record of all the products will be created which involves all necessary details of the product. By doing so the understanding of stocks will be effective thereby increasing the profit of retailers

4.	<b>Social Impact / Customer Satisfaction</b>	Good inventory management allows businesses to answer the questions of their customers about the product, which could lead them to purchase the item. Having visibility of the activities of your inventory gives customer support the data they need.

5.	<b>Business Model (Revenue Model)</b>	<p>Step 1: Create a centralized record of all products</p> <p>Step 2: Identify Stock location</p> <p>Step 3: Do regular and accurate stock counts</p> <p>Step 4: Combine Sales data with inventory data to simplify reporting</p> <p>Step 5: Purchasing process description</p> <p>Step 6: Establish process for markdown and promotions</p> <p>Step 7: Create Stock Receiving procedures</p> <p>Step 8: Provide description of return procedure</p> <p>Step 9: Determine Dead stock procedure</p> <p>Step 10: Provide Profitable inventory value</p>
6.	<b>Scalability of the Solution</b>	<p>This project aims at small retail store owners for managing their sales and profit of the store. Through this methodology retail store owners can manage stocks effectively thereby reducing loss and increasing profit through proper management and provide customer satisfaction.</p>
